

## MongoDB Compass connect string to your Atlas server

`mongodb+srv://tpawlow1:SXAbgKn0FxbPStR5@nbda-project3.ctkvdi.mongodb.net/test`

## Explanation of additional features, if any.

No additional features were added to this project.

## Explanation of status, stopping point, and issues if incomplete.

Project has been completed to the best of my ability within the timeframe provided.

## Discuss the easy and challenging parts of the assignment. How did you overcome all or some of the challenges?

One of the more difficult parts was getting the index.ejs to work for displaying all events under their respective titles. To solve this, I woke up early one morning and broke it up into getting the distinct events, then filling out all other events under their respective event category.

Easy part was transferring over the database interaction methods in the controllers file.
